21 | #####
22 | #
23 | # Gradle start up script for POSIX generated by Gradle.
24 | #
25 | # Important for running:
26 | #
27 | # (1) You need a POSIX-compliant shell to run this script. If your /bin/sh is
28 | # noncompliant, but you have some other compliant shell such as ksh or
29 | # bash, then to run this script, type that shell name before the whole
30 | # command line, like:
31 | #
32 | #     ksh Gradle
33 | #
34 | # Busybox and similar reduced shells will NOT work, because this script
35 | # requires all of these POSIX shell features:
36 | # * functions;
37 | # * expansions $?var?, ?${var}?, ?${var:-default}?, ?${var+SET}?,
38 | #   ?${var#prefix}?, ?${var%suffix}?, and ?$( cmd )?;
39 | # * compound commands having a testable exit status, especially ?case?;
40 | # * various built-in commands including ?command?, ?set?, and ?ulimit?.
41 | #
42 | # Important for patching:
43 | #
44 | # (2) This script targets any POSIX shell, so it avoids extensions provided
45 | # by Bash, Ksh, etc; in particular arrays are avoided.
46 | #
47 | # The "traditional" practice of packing multiple parameters into a
48 | # space-separated string is a well documented source of bugs and security
49 | # problems, so this is (mostly) avoided, by progressively accumulating
50 | # options in "$@", and eventually passing that to Java.
51 | #
52 | # Where the inherited environment variables (DEFAULT_JVM_OPTS, JAVA_OPTS,

```

```

53 | #      and GRADLE_OPTS) rely on word-splitting, this is performed explicitly;
54 | #      see the in-line comments for details.
55 | #
56 | #      There are tweaks for specific operating systems such as AIX, CygWin,
57 | #      Darwin, MinGW, and NonStop.
58 | #
59 | #      (3) This script is generated from the Groovy template
60 | #      https://github.com/gradle/gradle/blob/HEAD/platforms/jvm/plugins-application/src/main/resources/org/gradle/api/internal/plugins/unixStartScript.txt
61 | #      within the Gradle project.
62 | #
63 | #      You can find Gradle at https://github.com/gradle/gradle/.
64 | #
