

ViN Browser (Android)

Complete Project Source Code Archive — All Files Included

Project Name:	ViN Browser for Android
Package ID:	com.vin.browser
Project Directory:	/home/vin/projects/vin-android
Total Code Files:	90 Files (100% Complete — Zero Omissions)
Binary & Media Assets:	20 Files (APKs, Zip Archives, Screenshots)
Primary Tech Stack:	Kotlin 2.0.0, Jetpack Compose, Material3, Coroutines, Flow
Core Architecture:	MVVM, StateFlow, Room/DataStore, Custom WebView Adblock Engine
Release Artifact:	ViN-Browser-v1.0.0-release.apk (26.5 MB)
Export Target:	Master Source Code Reference for vin

```

1 | # ViN Browser -- Feature Integration Audit
2 |
3 | Repo: `D:\Games\vin-android` ? Package `com.vin.browser` ? Kotlin + Jetpack Compose,
  |   single-Activity, WebView-based.
4 | Audit date: 2026-08-30. All line numbers are exact at time of audit.
5 |
6 | ---
7 |
8 | ## 0. Architecture Baseline (read this first)
9 |
10 | **App shell**
11 | - `MainActivity.kt:31-48` -- `ComponentActivity`, `viewModels()` ? `BrowserViewModel`,
  |   `setContent { VinBrowserTheme { VinBrowserRoot(...) } }`.
12 | - `MainActivity.kt:52-498` -- `VinBrowserRoot` is the monolithic root composable holding
  |   ALL overlay state (search overlay, find-in-page, activeWebView ref, page progress) and
  |   rendering all sheets.
13 | - Screen routing: `currentScreen: StateFlow<String>` in `BrowserViewModel.kt:50-51`, values
  |   `"home" | "search" | "web"`. Routed by `when(currentScreen)` at
  |   `MainActivity.kt:240-298`.
14 | - Back-button stack handled manually via `BackHandler` at `MainActivity.kt:155-179`.
15 |
16 | **Tabs & WebView model** (critical for features 1, 7, 12)
17 | - Tab model: `TabState` (`data/Models.kt:28-35`) -- `id, title, url, isLoading, isHome,
  |   favicon`. **No incognito flag, no saved WebView state, no hibernation fields.**
18 | - Tab list + active id: `BrowserViewModel.kt:27-31`.
19 | - **Only ONE WebView exists at any time.** `WebViewScreen` is wrapped in `key(activeTabId)`
  |   at `MainActivity.kt:271` -- switching tabs **destroys and recreates** the WebView from
  |   scratch and re-loads `tab.url` via the `loadEvent` nonce
  |   (`BrowserViewModel.kt:308-330`, `WebViewScreen.kt:277-282`). There is no
  |   `saveState/restoreState`, no WebView pool, no per-tab instance map.
20 | - WebView creation: `AndroidView(factory = ...)` in `WebViewScreen.kt:98-228`,
  |   instantiating custom `com.vin.browser.engine.VinWebView` (line 100). Settings block:
  |   lines 106-129. Clients: `VinWebViewClient` at 165-188, `WebChromeClient` at 190-224.
21 | - Custom `VinWebView` (`engine/VinWebView.kt:13-35`) overrides `onWindowVisibilityChanged`
  |   for background-play spoofing. Deliberately does NOT intercept touch (per its KDoc) --
  |   relevant to feature 8.
22 | - Tab thumbnails: in-memory LruCache only (`data/TabThumbnailManager.kt:8-55`), captured on
  |   `onPageFinished` (`WebViewScreen.kt:185`).
23 |
24 | **Search flow**
25 | - Omnibox on Home is a **fake input** (clickable Surface, no TextField):
  |   `HomeScreen.kt:72-128`, `clickable { onOmniboxClick() }` at line 80 ? opens
  |   `SearchOverlaySheet` (`MainActivity.kt:244`, `328-340`).
26 | - Real text input lives in `SearchOverlaySheet.kt:86-119` (`BasicTextField`,
  |   `imeAction.Search` at 95, `onSearch` at 97-103) ? `MainActivity.kt:332-336` ?
  |   `vm.updateSearchQuery(q)` + `vm.performSearch()`.
27 | - `performSearch()` : `BrowserViewModel.kt:125-166`. URL heuristic at 130-138 (TLD whitelist
  |   at 107). Engine routing at 143-165: engine `"all"` ? unified in-app results screen;
  |   otherwise `navigateToUrl(engine.queryUrl % query)`.
28 | - `navigateToUrl` : `BrowserViewModel.kt:168-187` -- sets `webViewUrl`,
  |   `currentScreen="web"`, bumps `loadEvent` nonce, writes history (184-186).
29 | - Unified results rendered by `SearchResultsScreen.kt:32-222` (shimmer skeletons 77-96,
  |   result cards 111-219). Results come from `SearchProviders.executeSearch`
  |   (`data/SearchProviders.kt:63-245`).
30 |
31 | **Find-in-Page (already implemented -- verified)**
32 | - Component `ui/components/FindInPageBar.kt:28+` (stateless; renders input + match counter
  |   + arrows).
33 | - State lives in `VinBrowserRoot` : `MainActivity.kt:87-92` (`showFindInPage`,
  |   `findInPageQuery`, `findActiveIndex`, `findTotalMatches`, `findNextTrigger`, `findPrevTrigger`).
34 | - Overlay rendered at `MainActivity.kt:219-232` (only when `currentScreen == "web"`).
35 | - Menu entry: `MenuSheet.kt:106-110` ("Find in Page" grid action) ? callback `onFindInPage`
  |   wired at `MainActivity.kt:397-400`.
36 | - WebView wiring: `setFindListener` at `WebViewScreen.kt:138-140`;
  |   `findAllAsync`/`clearMatches` in AndroidView `update` block at
  |   `WebViewScreen.kt:266-270`; `findNext(true/false)` triggered by `LaunchedEffect` at
  |   `WebViewScreen.kt:285-296`; props passed at `MainActivity.kt:279-285`.
37 | - Back-handler case at `MainActivity.kt:157-160`.
38 | - [PASS] Verdict: **fully present and functional. Do not rebuild; only take care not to
  |   break the trigger-counter pattern (Int increments as pseudo-events).**
39 |
40 | **Storage** (`data/StorageService.kt`)
41 | - `SharedPreferences("vin_browser", MODE_PRIVATE)` (line 10) + hand-rolled JSON arrays. No
  |   Room/DataStore/files.
42 | - Speed dials: `getSpeedDials` (12), `saveSpeedDials` (29), `addSpeedDial` (43),
  |   `updateSpeedDial` (58), `deleteSpeedDial` (74). Defaults at 201-212. Key
  |   `"speed_dials_v2"`. **No reorder API** (needed by feature 10).
43 | - History: `addToHistory` (82, cap 500 at 91), `getHistory` (95), `clearHistory` (106). Key
  |   `"history"`.
44 | - Bookmarks: `addBookmark` (110), `getBookmarks` (120). Key `"bookmarks"` (no delete!).
45 | - Per-site settings JSON: `getSiteSettings`/`saveSiteSettings` (131-168), key

```

```

|     `site_settings` <domain>`, fields mirrored to `SiteControlSettings` (`Models.kt:58-70`).
46 | - Global toggles (170-193): engine, lite_mode, global_adblock, cosmetic_filter,
|   tracker_block, https_upgrade, crypto_block, bg_audio_play, onboarding_done.
47 | - [WARN] Note: `PrivacyDashboardSheet.kt:49-53` keeps its toggles in local `remember` state
|   -- they are NOT persisted and don't read from StorageService.
48 |
49 | **Theme**
50 | - `ui/theme/Theme.kt:22-49` `VinBrowserTheme(darkTheme = isSystemInDarkTheme())` -- follows
|   system only; **no in-app dark/light toggle, no state hoisting**.
51 | - Palettes in `ui/theme/Color.kt`: `VinDarkColors` (30-54), `VinLightColors` (56-80),
|   extended brand roles `VinColors` (83-93) with `VinDarkExtended` / `VinLightExtended`
|   (95-117). Accessor `VinTheme.colors` (Theme.kt:17-20).
52 | - Tokens: `Dimens.kt` (`Space`, `Sizes` objects).
53 |
54 | **Manifest** (`app/src/main/AndroidManifest.xml`)
55 | - Permissions (4-16): INTERNET, ACCESS_NETWORK_STATE, ACCESS_WIFI_STATE, CAMERA,
|   RECORD_AUDIO, ACCESS_FINE_LOCATION, WRITE_EXTERNAL_STORAGE (?28),
|   DOWNLOAD_WITHOUT_NOTIFICATION, WAKE_LOCK, POST_NOTIFICATIONS, FOREGROUND_SERVICE,
|   FOREGROUND_SERVICE_MEDIA_PLAYBACK.
56 | - Application (18-27): `VinBrowserApp`, `usesCleartextTraffic="true"` +
|   `networkSecurityConfig`.
57 | - MainActivity (29-45): `exported`, `windowSoftInputMode="adjustResize"`,
|   `launchMode="singleTask"`, VIEW intent-filter for http/https. **NO
|   `android:supportsPictureInPicture`, NO `android:configChanges`.**
58 | - Service: `MediaPlayerService` (48-51), `foregroundServiceType="mediaPlayback"`.
59 | - **`onUserLeaveHint` is NOT overridden anywhere** (verified by grep -- zero matches).
60 |
61 | **Gradle** (`app/build.gradle.kts`)
62 | - Dets at 44-60: compose-bom 2025.05.01, activity-compose 1.10.1, lifecycle 2.9.1, core-ktx
|   1.16.0, **`androidx.webkit:webkit:1.13.0` (line 55 -- WebSettingsCompat already
|   available)**, material 1.12.0, coil 2.7.0, media 1.7.0.
63 | - **NO WorkManager dependency.** No version catalog (`gradle/libs.versions.toml` doesn't
|   exist); versions hardcoded. minSdk 26 / target 36 / compileSdk 36, Kotlin 2.1.21, AGP
|   8.9.1.
64 |
65 | **DI pattern**: none. Singletons only: `AdBlockEngine.instance` (lazy companion,
|   `adblock/AdBlockEngine.kt:48-50`), `TabThumbnailManager` object, `SearchProviders`
|   object. `StorageService` is instantiated twice (VM `BrowserViewModel.kt:23` and App
|   `VinBrowserApp.kt:20`) -- both point at the same SharedPreferences.
66 |
67 | **Ad-block engine**
68 | - `VinBrowserApp.onCreate` (`VinBrowserApp.kt:18-38`) async-loads **assets** `easylst.txt`
|   / `easyprivacy.txt` and pushes parsed rules into the engine.
69 | - [WARN] Asset filter lists are ~1 KB token files (stubs), NOT the real EasyList.
70 | - `FilterListLoader.parse` (`FilterListLoader.kt:14-38`) supports only `||domain^` and
|   substring rules; skips cosmetic/allow rules.
71 | - `AdBlockEngine.loadRules` (`AdBlockEngine.kt:92-100`) -- **hard cap: patternRules limited
|   to 500** (line 96). Blocking pipeline in `VinWebViewClient.shouldInterceptRequest`
|   (`VinWebViewClient.kt:74-98`).
72 |
73 | **Existing gestures**
74 | - Horizontal swipe on bottom bar for prev/next tab: `BottomNavBar.kt:59-76`
|   (`detectHorizontalDragGestures`, threshold 75f).
75 | - Horizontal swipe-to-close on tab cards in TabTraySheet (imports
|   `detectHorizontalDragGestures` at `TabTraySheet.kt:10`).
76 | - **NO pull-to-refresh, NO `nestedScroll` wiring, NO edge-swipe anywhere in WebViewScreen**
|   (grep-verified).
77 |
78 | ---
79 |
80 | ## Feature 1 -- Incognito / Private browsing
81 |
82 | **Integration points**
83 | - `data/Models.kt:28-35` -- add `isIncognito: Boolean = false` to `TabState`.
84 | - `BrowserViewModel.kt:27` (tab seed), `300-306` (`addTab`), `308-330` (`switchTab`),
|   `377-395` (`updateActiveTab`) -- thread the flag through; skip `storage.addToHistory`
|   (184-186) when incognito.
85 | - `WebViewScreen.kt:98-129` -- factory/settings branch: for incognito pass `isIncognito`
|   down and in factory set `settings.cacheMode = LOAD_NO_CACHE`, `saveFormData=false`;
|   after creation call `CookieManager.getInstance().setAcceptCookie(false)` per-WebView
|   via `CookieManager.setAcceptThirdPartyCookies(webView, false)`; cleanest: construct
|   with ephemeral profile (API 28+ `WebView(context, null, 0, null)` party not available
|   -- standard approach is global `CookieManager.setAcceptCookie(false)` toggling, or
|   `WebStorage` / `WebViewDatabase` skipping) -- simplest robust route: keep single-WebView
|   architecture, toggle cookie/cache per active tab and wipe
|   (`CookieManager.removeSessionCookies`, clear cache) on incognito tab close.
86 | - `MainActivity.kt:271` -- `key(activeTabId)` recreation already isolates WebViews per tab
|   id; no structural change needed.
87 | - UI shell ALREADY EXISTS: `TabTraySheet.kt:116-166` has a "Standard / Incognito (0)"
|   segmented header and an Incognito placeholder (lines 142-166) -- wire it up instead of
|   adding new UI.
88 | - `MainActivity.kt:241-262` HomeScreen params and `MenuSheet` would gain a "New Incognito
|   Tab" entry (`MenuSheet.kt:130` row area).
89 |
90 | **Conflicts / risks**
91 | - Global `CookieManager` is process-wide: flipping `setAcceptCookie` affects the normal tab
|   too if both are alive. Since only one WebView lives at a time (key() destroys the old),

```

```

|         toggling on switch is safe **but** must also pause the ad-block stats attribution if
|         desired.
92 | - `VinWebViewClient` history writes: `doUpdateVisitedHistory` (`VinWebViewClient.kt:63-72`)
|         calls `onPageStartedCallback` ? VM writes history only via `navigateToUrl`; verify
|         `onPageStarted` (VM 347-353) doesn't add history (it doesn't -- only `navigateToUrl`
|         does). Incognito check belongs at `BrowserViewModel.kt:184-186`.
93 | - `TabThumbnailManager.captureFromWebView` (`WebViewScreen.kt:185`) must be skipped for
|         incognito tabs (thumbnail = privacy leak in tab tray).
94 |
95 | **Strategy:** add `isIncognito` to TabState, branch WebView factory settings + cookie/cache
|         handling, guard history/thumbnail writes, and revive the existing dormant TabTraySheet
|         incognito segment.
96 |
97 | ## Feature 2 -- Live search suggestions
98 |
99 | **Integration points**
100 | - `SearchOverlaySheet.kt:86-119` -- `BasicTextField.onValueChange` (line 88) currently only
|         sets local state; debounce here and render suggestion list below the input row (inside
|         the Column at 53-158).
101 | - New provider call in `data/SearchProviders.kt` (object, e.g. `suspend fun suggest(query):
|         List<String>` using `https://duckduckgo.com/ac/?q=%s&type=list` or
|         `suggestqueries.google.com/complete/search?client=firefox&q=`).
102 | - Wire via `MainActivity.kt:328-340` (pass a `onQueryChange`/suggestions lambda or hoist
|         into VM) -- cleanest: add `suggestions: StateFlow<List<String>>` +
|         `updateSuggestionQuery()` to `BrowserViewModel.kt` near search state (36-47), following
|         the existing `searchJob` cancellation pattern (144).
103 | - History-based local suggestions can reuse `StorageService.getHistory()`
|         (`StorageService.kt:95`).
104 |
105 | **Conflicts / risks**
106 | - The overlay sheet is a `ModalBottomSheet` (line 47) -- adding a list must stay inside the
|         sheet's Column or the sheet will clip; use heightIn and make the sheet scrollable.
107 | - Voice search path (`MainActivity.kt:121-131`) bypasses the overlay -- unaffected.
108 |
109 | **Strategy:** debounce query changes in SearchOverlaySheet against a new
|         `SearchProviders.suggest()` (DDG autocomplete endpoint), showing history entries +
|         network suggestions in a simple Column below the input.
110 |
111 | ## Feature 3 -- Bang shortcuts (!yt, !w, !gh, !r, !g)
112 |
113 | **Integration points**
114 | - `BrowserViewModel.performSearch()` -- `BrowserViewModel.kt:125-166`. Parse leading token
|         before the URL heuristic (line 130): if `q` starts with `!xx`, map bang ? engine id /
|         target URL, strip the token, continue.
115 | - Engine map already exists: `SearchProviders.kt:13-25` (`engines` with ids `google`,
|         `reddit`, `duckduckgo`, `brave`, `bing...`) -- `!g`?`google`, `!r`?`reddit`, `!d`?`duckduckgo`
|         are one lookup; site-bangs can reuse `officialSites` map at `SearchProviders.kt:29-61`
|         (already contains `yt`, `gh`, `wiki`, `chess`, etc. as keys!).
116 | - Suggestion/UX surface: same overlay as feature 2 (`SearchOverlaySheet.kt`), and
|         optionally the engine pill (lines 138-151) to hint active bang.
117 |
118 | **Conflicts / risks**
119 | - Ordering: bang parsing MUST run before the URL-validity check
|         (`BrowserViewModel.kt:130-138`) or `!w` something could be misrouted; also before
|         engine routing at 143-165 (bang overrides selected engine).
120 | - `selectEngine` re-search at `BrowserViewModel.kt:200-202` calls `performSearch()` again
|         -- must be bang-idempotent (strip token once, store resolved query).
121 |
122 | **Strategy:** prepend a bang-parser step in `performSearch` that maps `!<token>` via
|         `SearchProviders.engines` ids + `officialSites` keys, overrides engine selection or
|         opens the site directly with remaining query.
123 |
124 | ## Feature 4 -- Filter list auto-updater (WorkManager weekly EasyList sync)
125 |
126 | **Integration points**
127 | - `app/build.gradle.kts:44-60` -- add `androidx.work:work-runtime-ktx` (no existing
|         WorkManager dep; no version catalog to update).
128 | - `VinBrowserApp.kt:18-38` -- schedule `PeriodicWorkRequest` (7 days) in `onCreate` after
|         storage init; keep the existing asset-load as offline bootstrap.
129 | - New `adblock/` worker: download EasyList/EasyPrivacy (note: real EasyList is ~2 MB and
|         ~50k rules -- see risks), parse with `FilterListLoader.parse`
|         (`FilterListLoader.kt:14-38`), persist to `filesDir` and `AdBlockEngine.loadRules`
|         (`AdBlockEngine.kt:92-100`).
130 | - `StorageService.kt:176-193` -- add `getLastFilterSync()`/`setLastFilterSync()` prefs next
|         to existing global toggles.
131 | - Privacy Dashboard is the natural UI surface for "last updated"
|         (`PrivacyDashboardSheet.kt:41-53` stats block).
132 |
133 | **Conflicts / risks**
134 | - [WARN] **`AdBlockEngine.loadRules` caps patternRules at 500** (`AdBlockEngine.kt:96`) and
|         domain rules go into a plain `HashSet` with no dedupe/count limits or atomics --
|         loading the real full EasyList will be slow and mostly discarded; either raise the cap
|         with a dedicated structure or sync a curated domain-only list.
135 | - [WARN] `loadRules` mutates live collections while `shouldInterceptRequest` reads them on
|         other threads (no synchronization; current code is technically already racy but the app
|         only loads once at startup). A background re-load during browsing needs a
|         swap-under-lock strategy (build new collections, atomic reference swap).

```

```

136 | - Manifest: WorkManager needs no new permission for periodic sync (no network constraint
    | needed if you add `NetworkType.CONNECTED`), but ensure no `usesCleartextTraffic`
    | reliance -- easylist.to is HTTPS, fine.
137 |
138 | **Strategy:** add work-runtime-ktx, schedule a weekly `CoroutineWorker` in
    | `VinBrowserApp.onCreate` that downloads ? `FilterListLoader.parse` ? atomically swaps
    | rule sets in `AdBlockEngine`, with last-sync timestamp in SharedPreferences surfaced in
    | the Privacy Dashboard.
139 |
140 | ## Feature 5 -- Forced dark mode for webpages
141 |
142 | **Integration points**
143 | - `WebViewScreen.kt:106-129` (settings.apply) and update block `229-271` -- call
    | `WebSettingsCompat.setAlgorithmicDarkeningAllowed(settings, enabled)` (webkit 1.13.0
    | already on classpath, `build.gradle.kts:55`). Note: algorithmic darkening requires
    | `isAlgorithmicDarkeningAllowed` on API 33+ for full effect and the app theme to be dark.
144 | - `WebViewScreen` needs a new param (like `isLiteMode` at line 39) threaded from
    | `MainActivity.kt:272-295`.
145 | - Setting storage: `StorageService.kt:170-193` (new `forced_dark` toggle beside
    | `lite_mode`).
146 | - Toggle UI: `MenuSheet.kt:144-160` row area (pattern: Lite Mode row at 144-148) and/or
    | per-site in `TrustSheet` via `SiteControlSettings` (`Models.kt:58-70` +
    | `StorageService.kt:131-168`).
147 | - Theme awareness: `Theme.kt:24` `darkTheme = isSystemInDarkTheme()` -- forced-dark is only
    | sensible when app is in dark theme; read `VinTheme.colors.isDark` (`Color.kt:92`)
    | inside `WebViewScreen`.
148 |
149 | **Conflicts / risks**
150 | - Algorithmic darkening silently does nothing on some devices/WebView versions below API 33
    | unless the app declares dark theme; test on minSdk 26 devices -- consider fallback
    | `forceDark = FORCE_DARK_ON` (deprecated but works on older WebView) behind a SDK check.
151 | - `update` block currently calls `reload()` on UA/overview changes (249, 255) -- toggling
    | darkening mid-session may need a reload too, which will fight with feature 8's
    | pull-to-refresh state.
152 |
153 | **Strategy:** add a `forcedDark` param to `WebViewScreen` that sets
    | `WebSettingsCompat.setAlgorithmicDarkeningAllowed` in factory+update, backed by a new
    | `StorageService` toggle surfaced as a `MenuSheet` row.
154 |
155 | ## Feature 6 -- Reader mode
156 |
157 | **Integration points**
158 | - Menu entry ALREADY EXISTS: `MenuSheet.kt:150-154` ("Reader View" row) currently stubbed
    | to a Toast at `MainActivity.kt:432-435` -- replace this wiring.
159 | - Extraction: evaluate JS on the live `WebView` (`WebViewScreen.kt` has `evaluateJavascript`
    | precedents at 179-183, 258-263) or a DOM parser; output can render in a new screen
    | state.
160 | - Screen routing: add `"reader"` to `currentScreen` (`BrowserViewModel.kt:50-51`,
    | `MainActivity.kt:240-298`) following the existing `"search"` precedent; new composable
    | file under `ui/screens/`.
161 | - Back stack: extend `BackHandler` at `MainActivity.kt:155-179` (add reader case before
    | `currentScreen == "web"`).
162 |
163 | **Conflicts / risks**
164 | - The single-WebView architecture means leaving "web" for a reader screen **destroys the
    | `WebView`** (when() swap at 240-298 removes it from composition) -- going back re-creates
    | and reloads the page. Options: overlay reader on top of web (Box wrapping at 235-239),
    | or accept reload cost. Overlay is safer.
165 | - Ad-block `CleanPage.inject` (`VinWebViewClient.kt:110`) mutates the DOM; extract reader
    | content before/independently of cosmetic filtering.
166 |
167 | **Strategy:** replace the Toast stub with a JS-based article extraction (readability-style
    | heuristics via `evaluateJavascript`) rendered in a composable overlaid on the web
    | screen, keeping the `WebView` alive underneath.
168 |
169 | ## Feature 7 -- Picture-in-Picture video
170 |
171 | **Integration points**
172 | - `AndroidManifest.xml:29-45` -- add `android:supportsPictureInPicture="true"` and
    | `android:configChanges="screenSize|smallestScreenSize|screenLayout|orientation|uiMode"`
    | to `MainActivity` (PiP causes config changes that would otherwise recreate the activity
    | and kill Compose state).
173 | - `MainActivity.kt:31-48` -- override `onUserLeaveHint()` (does NOT exist today) and call
    | `enterPictureInPictureMode(params)` when video is playing; for API 31+ also
    | `setAutoEnterEnabled(true)` via `PictureInPictureParams`.
174 | - Video-playing signal: `MediaBridge` / `BackgroundAudioEngine`
    | (`engine/BackgroundAudioEngine.kt:8,30`) already track media state in JS and talk to
    | `MediaPlayerService`; the `MediaPlayerService.isPlaying` flag
    | (`service/MediaPlaybackService.kt:33-34`) is the existing "is media active" signal to
    | gate auto-PiP.
175 | - Aspect-ratio source: `WebChromeClient` `onPictureInPictureModeChanged` custom video APIs
    | not used; simplest is default 16:9 params.
176 |
177 | **Conflicts / risks**
178 | - [WARN] **`VinWebView.onWindowVisibilityChanged` hack** (`engine/VinWebView.kt:28-34`)
    | forces VISIBLE during PiP transitions when `isBackgroundPlayActive` is true -- behavior
    | during PiP must be tested; PiP fires `onWindowVisibilityChanged(GONE)` on some OEMs and

```

```

|     the existing override will fight the PiP window lifecycle.
179 | - `MainActivity` currently doesn't handle any `onConfigurationChanged` (Compose recomposes
|     on config change by default) -- without `configChanges` in manifest, entering PiP
|     recreates the activity ? WebView destroyed ? video stops. This is the #1 integration
|     hazard.
180 | - Existing background-play foreground service (`MediaPlayerService`, manifest 48-51)
|     overlaps in purpose: when audio-only background play is running, skip auto-PiP to avoid
|     double-keep-alive.
181 |
182 | **Strategy:** manifest attrs + `onUserLeaveHint`/`setAutoEnterEnabled` in MainActivity
|     gated on `MediaPlayerService.isMediaPlaying`, accepting default aspect ratio, and
|     verifying VinWebView's visibility override doesn't block PiP.
183 |
184 | ## Feature 8 -- Pull-to-refresh + edge swipe gestures
185 |
186 | **Integration points**
187 | - `WebViewScreen.kt:97-274` -- the `Column > AndroidView` structure; pull-to-refresh needs
|     either Material3 `PullToRefreshBox` wrapping the AndroidView, or
|     `Modifier.nestedScroll` with `rememberPullToRefreshState` on the Column (line 97).
|     Refresh action = `currentWebView?.reload()` (precedent: menu reload at
|     `MainActivity.kt:390`).
188 | - Scroll signal: WebView content offset must be queried via `webView.scrollY == 0` (or
|     `computeVerticalScrolloffset`) -- `VinWebView` (`engine/VinWebView.kt`) does not
|     currently expose this; add an `isAtTop` helper there.
189 | - Edge swipe: no existing edge gestures; horizontal tab switching already exists on the
|     bottom bar (`BottomNavBar.kt:59-76`) -- edge swipe on the WebView would reuse
|     `vm.swipeNextTab()/swipePrevTab()` (`BrowserViewModel.kt:266-280`). Add a transparent
|     edge strip Box with `pointerInput` in the content Box at `MainActivity.kt:235-239`, or
|     a custom `Modifier.pointerInput` layer in WebViewScreen.
190 | - Back/forward edge swipe (Chrome-style) alternative: `activeWebView?.canGoBack()` (used at
|     `MainActivity.kt:303`).
191 |
192 | **Conflicts / risks**
193 | - [WARN] `VinWebView` KDoc (lines 8-12) explicitly says it does NOT intercept touch to keep
|     DOM touch dispatch intact -- wrapping with Compose gesture layers must not break
|     in-page horizontal carousels/gestures. Pull-to-refresh (vertical) conflicts with
|     in-page vertical overscroll (iOS-style rubbers); gate on `isAtTop`.
194 | - The `update` block's `reload()` calls (`WebViewScreen.kt:249, 255`) can race with a user
|     pull-to-refresh; debounce or dedupe.
195 | - AndroidView + nestedScroll: WebView participates in nested scrolling natively only via
|     `setNestedScrollingEnabled`; Compose interop for PTR over AndroidView requires manual
|     offset consumption -- budget for iteration here.
196 |
197 | **Strategy:** wrap the WebView AndroidView in Material3 PullToRefreshBox gated on an
|     `isAtTop` check added to VinWebView, and add narrow left/right edge pointerInput strips
|     that trigger existing `swipePrevTab/swipeNextTab`.
198 |
199 | ## Feature 9 -- Webpage translation
200 |
201 | **Integration points**
202 | - Cheapest route: navigate to Google Translate view-URL
|     (`https://translate.google.com/translate?sl=auto&tl=<lang>&u=<url>`) via
|     `vm.navigateToUrl` (`BrowserViewModel.kt:168-187`) -- zero new infrastructure.
203 | - Menu surface: new row in `MenuSheet.kt:130-160` (pattern: existing rows) + language
|     picker dialog; wiring point `MainActivity.kt:384-441`.
204 | - Target-language persistence: `StorageService.kt:170-193` (new `translate_target_lang`
|     pref).
205 | - If in-page translation desired: JS injection point is `VinWebViewClient.onPageFinished`
|     (`VinWebViewClient.kt:100-124`) where `CleanPage.inject`/`YouTubeFocus.inject` already
|     run -- same pattern for a translate snippet, but heavy.
206 |
207 | **Conflicts / risks**
208 | - Google's translate-proxy URL path periodically breaks for SPAs; m.youtube.com etc. may
|     refuse framing.
209 | - If done via JS injection, it competes with `CleanPage.inject` (110) and YouTube focus
|     (114-116) mutation ordering.
210 | - Single-WebView + `loadEvent` nonce means the translated URL becomes the tab URL -- back
|     history gets polluted; consider storing original URL in TabState.
211 |
212 | **Strategy:** ship v1 as a MenuSheet row that rewrites the current URL through Google
|     Translate's proxy endpoint via `navigateToUrl`, persisting the chosen target language;
|     keep injected-JS translation as a later upgrade.
213 |
214 | ## Feature 10 -- Customizable speed dials (add/edit/delete/reorder)
215 |
216 | **Integration points**
217 | - Add/Edit/Delete **already fully exist**: HomeScreen add dialog `HomeScreen.kt:259-303`,
|     edit dialog 306-350, long-press action sheet 203-256; VM APIs
|     `BrowserViewModel.kt:251-264`; storage `StorageService.kt:43-77`.
218 | - **Only reorder is missing.** Options: (a) long-press drag in the grid -- the grid is
|     hand-rolled `Row` chunks (`HomeScreen.kt:162-198`), NOT LazyVerticalGrid, so there's no
|     built-in drag support; (b) explicit "Edit Order" mode with ?? buttons in the action
|     sheet (203-256) -- cheap and consistent.
219 | - Storage: `StorageService.saveSpeedDials(items)` (`StorageService.kt:29-41`) already
|     persists order (JSON array preserves order) -- just add `reorderSpeedDials(items:
|     List<SpeedDialItem>)` wrapper or call saveSpeedDials from VM with a new
|     `moveSpeedDial(from,to)` (`BrowserViewModel.kt` near 251-264).

```

```

220 **Conflicts / risks**
221 - The grid is inside a `verticalScroll` Column (`HomeScreen.kt:66`) -- drag-and-drop
222   reorder in a scrolling hand-rolled grid is meaningful work (no LazyGrid semantics); the
223   chunked-Row layout (163-165) breaks down if per-row counts change during drag
224   animations.
225 - `displayItems = speedDials + null` (line 164) appends the "+" tile -- reorder logic must
226   exclude the null sentinel.
227 **Strategy:** implement reorder as an explicit edit-mode (move up/down or drag within an
228   "Arrange" bottom sheet listing dials in a LazyColumn), persisting via existing
229   `saveSpeedDials`; leave the chunked display grid untouched.
230 ## Feature 11 -- Safe Browsing (WebSettingsCompat)
231 **Integration points**
232 - `WebViewScreen.kt:106-129` (factory settings) --
233   `WebSettingsCompat.setSafeBrowsingEnabled(webView.settings, true)`; webkit 1.13.0
234   already a dependency (`build.gradle.kts:55`). Optional `setSafeBrowsingAllowlist` for
235   allowlisted hosts.
236 - Per-site opt-out would extend `SiteControlSettings` (`Models.kt:58-70`) +
237   `StorageService.getSiteSettings/saveSiteSettings` (`StorageService.kt:131-168`) +
238   TrustSheet toggle.
239 - Global toggle: `StorageService.kt:170-193` + Privacy Dashboard row
240   (`PrivacyDashboardSheet.kt` -- note its toggles are currently unpersisted locals at
241   49-53; fix that while here).
242 - [WARN] Note: `settings.safeBrowsingEnabled` defaults to true on modern WebViews --
243   feature is effectively "make it explicit + per-site control + UI acknowledgment".
244 **Conflicts / risks**
245 - Minimal. Ensure the update block (`WebViewScreen.kt:229-271`) also applies the setting
246   when toggled at runtime (pattern: cacheMode check at 241-244).
247 - Interplay with the custom `shouldInterceptRequest` blocker (`VinWebViewClient.kt:74-98`):
248   returning empty 200 responses happens before Safe Browsing sees the request in some
249   flows -- order is fine, but don't double-report blocked counts in the shield badge.
250 **Strategy:** one-line `WebSettingsCompat.setSafeBrowsingEnabled(settings, true)` in
251   factory + update block, plus a persisted global toggle surfaced in PrivacyDashboard
252   (and optionally per-site in TrustSheet).
253 ## Feature 12 -- Smart tab hibernation (10+ tabs)
254 **Integration points**
255 - Tab list: `BrowserViewModel.kt:27-31`; `addTab` 300-306; `switchTab` 308-330; `closeTab`
256   332-345.
257 - Reality check: tabs are already "hibernated" by design -- only the active tab has a
258   WebView (everything else is a data class + LruCache thumbnail
259   `TabThumbnailManager.kt:8-55`). True memory consumers per inactive tab: favicon bitmap
260   (`TabState.favicon`, `Models.kt:34`) and thumbnail bitmap.
261 - Hibernation therefore means: (a) when `_tabs.value.size >= 10`, null out `favicon` on
262   inactive tabs (`BrowserViewModel.updateActiveTab` 377-395 or a sweep after
263   `addTab`/`closeTab`), (b) drop thumbnails from the LruCache for inactive tabs
264   (`TabThumbnailManager.removeThumbnail` exists, `TabThumbnailManager.kt:28-30`), (c)
265   optionally mark tabs with `isHibernated` flag for UI badge in `TabTraySheet.kt:177-189`
266   (TabCardItem call site).
267 - Trigger sweep in `addTab` (`BrowserViewModel.kt:300-306`) post-append.
268 **Conflicts / risks**
269 - `TabTraySheet` thumbnails come from `TabThumbnailManager.getThumbnail` -- dropping them
270   degrades the tray UX; keep the most-recent N (LRU already evicts by size).
271 - `restoreTabs`/`closeAllTabs` undo flow (`BrowserViewModel.kt:282-298`,
272   `MainActivity.kt:349-361`) must preserve hibernation state semantics.
273 - If real per-tab WebView persistence is ever added (state bundles via
274   `WebView.saveState`), hibernation becomes the natural place to store/restore -- flag
275   the field now to avoid model churn later.
276 - Do not confuse with feature 1: incognito tabs should be dropped entirely rather than
277   hibernated (state would persist in memory).
278 **Strategy:** lightweight -- when tab count > 10, sweep inactive tabs to release
279   favicon/thumbnail bitmaps (marking `isHibernated` in TabState for tray UI), since
280   WebViews are already single-instance by architecture.
281 ---
282 ## Cross-cutting recommendations
283 1. **Highest-conflict file is `MainActivity.kt`** (features 1, 2, 5, 6, 8, 9, 12 all touch
284   `VinBrowserRoot`). Sequence merges carefully or extract overlay state into the VM first.
285 2. **`WebViewScreen.kt` factory block (98-228)** is the second hot spot (features 1, 5, 6,
286   8, 11). The factory captures params at creation time -- new toggles must ALSO go into
287   the `update` block (229-271) to apply without recreation; follow the existing cacheMode
288   diff-check pattern (241-244).
289 3. **Add WorkManager dep once** (feature 4) -- no catalog exists; hardcode version like the
290   rest.
291 4. **PrivacyDashboardSheet local toggles are decorative** (49-53) -- several features (4,
292   11) want that surface; fix persistence there before adding more rows.
293 5. **`BrowserViewModel.performSearch` is the single funnel for omnibox, voice, overlay, speed

```

```
| dial, history, bookmarks, search results (7 callers) -- bang parsing (feature 3) and
| suggestions (feature 2) must be funnel-safe/idempotent.
```

9 | ## IMMEDIATE: Build & Fix
10 |
11 | ```bash
12 | cd /path/to/vin-android
13 | ./gradlew assembleDebug
14 | ```
15 |
16 | Fix any compilation errors. All imports and signatures were manually verified but not
17 | tested.
18 | ---
19 |
20 | ## TODO -- Unwired Features
21 |
22 | ### 1. QR Scanner Navigation (HIGH)
23 | - `QrScannerScreen.kt` exists at `ui/screens/QrScannerScreen.kt`
24 | - Needs to be added to `MainActivity.kt` navigation
25 | - ViewModel has `showQrScanner` / `dismissQrScanner` state
26 | - Add `if (vm.showQrScanner) { QrScannerScreen(...) }` overlay
27 |
28 | ### 2. Reading List Menu Integration (HIGH)
29 | - `ReadingListSheet.kt` exists at `ui/components/ReadingListSheet.kt`
30 | - Add sheet state + overlay in `MainActivity.kt`
31 | - Add "Reading List" button in `MenuSheet.kt`
32 |
33 | ### 3. Screenshot Feature (MEDIUM)
34 | - Screenshot logic exists but no UI button
35 | - Add "Screenshot Page" option in `MenuSheet.kt`
36 | - Implement `WebView.capturePicture()` or `draw(Canvas)` in `WebViewScreen.kt`
37 |
38 | ### 4. User Scripts Injection (MEDIUM)
39 | - `UserScriptSheet.kt` + `ScriptEditorSheet.kt` exist
40 | - Need to inject JS/CSS in `VinWebView.kt` via `shouldInterceptRequest` or
41 |   `evaluateJavascript`
42 | - Add script enable/disable toggle persistence
43 |
44 | ### 5. Tab Groups UI (LOW)
45 | - `TabGroup` model exists in `Models.kt`
46 | - Update `TabTraySheet.kt` to show groups
47 | - Add color-coded group badges
48 |
49 | ### 6. Download Manager Listener (LOW)
50 | - `DownloadManagerSheet.kt` exists
51 | - Add `WebView.setDownloadListener()` in `WebViewScreen.kt`
52 | - Track downloads in `StorageService`
53 |
54 | ---
55 |
56 | ## TODO -- AndroidManifest.xml
57 |
58 | Check and add if missing:
59 | ```xml
60 | <uses-permission android:name="android.permission.CAMERA" />
61 | <uses-permission android:name="android.permission.FOREGROUND_SERVICE" />
62 | <uses-permission android:name="android.permission.FOREGROUND_SERVICE_MEDIA_PLAYBACK" />
63 | ```
64 | ---
65 |
66 | ## TODO -- Testing
67 |
68 | After build succeeds:
69 | 1. Install on device/emulator
70 | 2. Test each new feature end-to-end
71 | 3. Test YouTube playback (YouTube fixes applied)
72 | 4. Test theme switching (AMOLED, Sepia)
73 | 5. Test QR scanner (needs camera permission)
74 | 6. Test reading list (save offline)
75 |
76 | ---
77 |
78 | ## Key Files to Read First
79 |
```

```

80 | 1. `PROJECT-HANDOFF.md` -- Full project state
81 | 2. `MainActivity.kt` -- Main entry, all sheet routing
82 | 3. `BrowserViewModel.kt` -- All state management
83 | 4. `data/Models.kt` -- All data classes
84 | 5. `data/StorageService.kt` -- All storage methods
85 |
86 | ---
87 |

```

1 | # ViN Browser -- Project Handoff
2 |
3 | > **Last Updated:** September 13, 2026
4 | > **Platform:** Android (Kotlin + Jetpack Compose)
5 | > **Package:** `com.vin.browser`
6 | > **Status:** Feature implementation in progress, NOT build-verified on this machine
7 |
8 | ---
9 |
10 | ## ? Project Overview
11 |
12 | ViN Browser is a privacy-focused Android browser with ad blocking, incognito mode, reader
13 | mode, background audio playback, QR code scanning, and a custom Compose UI.
14 |
15 | ### Tech Stack
16 | | Component | Version |
17 | | ---|---|
18 | | Language | Kotlin 2.1.21 |
19 | | UI | Jetpack Compose + Material 3 |
20 | | Build | Gradle Kotlin DSL, AGP 8.9.1 |
21 | | Min SDK | 26 (Android 8.0) |
22 | | Target/Compile SDK | 36 |
23 | | Dependencies | Coil, ZXing (QR), CameraX + MLKit (QR scan), AndroidX WebKit |
24 |
25 | ---
26 | ## ?? File Structure (52 Kotlin files)
27 |
28 | ```
29 | app/src/main/java/com/vin/browser/
30 | |-- MainActivity.kt (885 lines) -- Main entry, sheet routing, navigation
31 | |-- BrowserViewModel.kt (867 lines) -- All state management, CRUD operations
32 | |-- data/
33 | | |-- Models.kt (114 lines) -- Data classes
34 | | |-- StorageService.kt (457 lines) -- SharedPreferences CRUD
35 | | |-- SearchProviders.kt -- Search engine configs
36 | | \-- TabThumbnailManager.kt -- Tab screenshot caching
37 | |-- adblock/
38 | | |-- AdBlockEngine.kt -- Ad blocking engine
39 | | |-- CleanPage.kt -- Aggressive page cleanup (MODIFIED -- less aggressive for YouTube)
40 | | |-- FilterListLoader.kt -- Filter list parsing
41 | | |-- FilterSyncWorker.kt -- Background filter sync
42 | | |-- VinWebViewClient.kt -- Custom WebViewClient (MODIFIED -- YouTube URL rewrite
43 | | |removed)
44 | | \-- YouTubeFocus.kt -- YouTube ad skip (MODIFIED -- only runs when features enabled)
45 | |-- engine/
46 | | |-- BackgroundAudioEngine.kt -- Background audio playback
47 | | |-- ReaderExtractor.kt -- Article extraction
48 | | |-- TrustEvaluator.kt -- SSL/security evaluation
49 | | \-- VinWebView.kt -- Custom WebView wrapper
50 | |-- doctor/
51 | | |-- BrowserDoctor.kt -- Diagnostic tool
52 | |-- service/
53 | | |-- MediaPlayerPlaybackService.kt -- Background media service
54 | |-- ui/
55 | | |-- components/
56 | | | |-- BottomNavBar.kt (188 lines) -- REWRITTEN -- Home/Search/+/Tabs/Menu
57 | | | |-- BookmarksSheet.kt -- Bookmarks UI
58 | | | |-- CommonWidgets.kt -- Shared composables
59 | | | |-- CookieManagerSheet.kt (NEW) -- Cookie viewer/clear
60 | | | |-- DoctorDiagnosticSheet.kt -- Diagnostics UI
61 | | | |-- DownloadManagerSheet.kt (NEW) -- Download tracker UI
62 | | | |-- EngineSelector.kt -- Engine picker
63 | | | |-- FaviconImage.kt -- Favicon loader
64 | | | |-- FindInPageBar.kt -- Find in page
65 | | | |-- HistorySheet.kt -- History UI
66 | | | |-- MenuSheet.kt (256 lines) -- MODIFIED -- added Tools/Privacy/Settings sections
67 | | | |-- PrivacyDashboardSheet.kt -- Privacy stats
68 | | | |-- QrGeneratorSheet.kt (NEW) -- QR code from URL
69 | | | |-- ReadingListSheet.kt (NEW) -- Save-for-later queue
70 | | | |-- ScriptEditorSheet.kt (NEW) -- Userscript code editor
71 | | | |-- SearchOverlaySheet.kt -- Search overlay
72 | | | |-- Shimmer.kt -- Loading shimmer
73 | | | |-- TabTraySheet.kt -- Tab tray

```

```

73 | | | |-- ThemePickerSheet.kt (NEW) -- 5-theme selector
74 | | | |-- TrustSheet.kt -- Trust/security sheet
75 | | | |-- UserScriptSheet.kt (NEW) -- Userscript manager
76 | | | \-- WebTopBar.kt -- WebView top bar
77 | | | |-- screens/
78 | | | |-- HomeScreen.kt (458 lines) -- REWRITTEN -- compact top bar + horizontal speed
79 | | | |-- OnboardingScreen.kt -- First-run onboarding
80 | | | |-- QrScannerScreen.kt (NEW) -- CameraX QR scanner
81 | | | |-- ReaderScreen.kt -- Reader mode
82 | | | |-- SearchResultsScreen.kt -- Search results
83 | | | \-- WebViewScreen.kt -- Main WebView
84 | | \-- theme/
85 | | | |-- Color.kt -- Color definitions
86 | | | |-- Dimens.kt -- Spacing/sizing tokens
87 | | | |-- Shape.kt -- Shape definitions
88 | | | \-- Theme.kt (136 lines) -- MODIFIED -- AMOLED + Sepia themes
89 | | |
90 | | |
91 | | | ---
92 | | |
93 | ## [PASS] What Was Implemented (10 Phases)
94 |
95 | ### Phase 1: Reading List
96 | - `ReadingListItem` data class in `Models.kt`
97 | - Full CRUD in `StorageService.kt`
98 | - ViewModel state flows in `BrowserViewModel.kt`
99 | - `ReadingListSheet.kt` -- Save-offline, clear all
100 | - **Status:** Code written, NOT build-verified
101 |
102 | ### Phase 2: Screenshot & Share
103 | - Full-page WebView screenshot saved to Pictures folder
104 | - Accessible from Menu
105 | - **Status:** Code written, NOT build-verified
106 |
107 | ### Phase 3: QR Code Scanner & Generator
108 | - `QrGeneratorSheet.kt` -- ZXing QR generation
109 | - `QrScannerScreen.kt` -- CameraX + MLKit barcode scanning
110 | - Dependencies added to `build.gradle.kts`
111 | - **Status:** Code written, NOT build-verified
112 |
113 | ### Phase 4: Custom Themes
114 | - `ThemePickerSheet.kt` -- 5 presets: System, Light, Dark, AMOLED Black, Sepia
115 | - `AmoledDarkColors` (pure #000000) and `SepiaColors` (warm tones) in `Theme.kt`
116 | - Persisted via `StorageService`
117 | - **Status:** Code written, NOT build-verified
118 |
119 | ### Phase 5: Cookie Manager
120 | - `CookieManagerSheet.kt` -- Per-domain cookie viewer
121 | - Clear per-domain or clear all
122 | - **Status:** Code written, NOT build-verified
123 |
124 | ### Phase 6: Quick Wins
125 | - Copy Link ? clipboard
126 | - Open in External App ? intent
127 | - Homepage greeting removed, replaced with compact top bar
128 | - **Status:** Code written, NOT build-verified
129 |
130 | ### Phase 7: Download Manager
131 | - `DownloadManagerSheet.kt` -- Active/Completed tabs
132 | - `DownloadInfo` model
133 | - **Status:** Code written, NOT build-verified
134 |
135 | ### Phase 8: User Scripts
136 | - `UserScriptSheet.kt` + `ScriptEditorSheet.kt`
137 | - Full CRUD with enable/disable toggle
138 | - **Status:** Code written, NOT build-verified
139 |
140 | ### Phase 9: Tab Groups
141 | - `TabGroup` model + `groupId` on `TabState`
142 | - Create/assign/close group
143 | - **Status:** Code written, NOT build-verified
144 |
145 | ### Phase 10: Data Usage Tracker
146 | - `DownloadInfo` tracking infrastructure
147 | - **Status:** Partially implemented
148 |
149 | ---
150 |
151 | ## ? UI Redesign (Applied)
152 |
153 | ### HomeScreen.kt -- Complete Rewrite
154 | - **Removed:** Greeting section ("Good Evening ?" + date/time)
155 | - **Added:** Compact top bar: Google G logo + search text + Mic + QR Scanner + VPN button
156 | - **Changed:** Speed Dial from 4-column grid ? horizontal scrollable single row
157 | - **Added:** `onQrScanClick` callback
158 |

```

```

159 | ### BottomNavBar.kt -- Complete Rewrite
160 | - **Removed:** ? Back / ? Forward navigation
161 | - **Added:** ? Home + ? Search icons
162 | - **Kept:** + new tab, tab count box, ? menu
163 | - **New params:** `onHomeClick`, `onSearchClick`
164 | - **Removed params:** `canGoBack`, `canGoForward`, `onBack`, `onForward`, `onHomeLongPress`
165 |
166 | ### Theme.kt -- New Color Schemes
167 | - `AmoledDarkColors` -- Pure #000000 black surfaces
168 | - `SepiaColors` -- Warm reading tones
169 | - `VinBrowserTheme` accepts `themePreset` parameter
170 |
171 | ---
172 |
173 | ## [TOOL] YouTube Fixes Applied
174 |
175 | ### CleanPage.kt -- Less Aggressive
176 | - `killIfOverlay` now excludes YouTube player elements (movie_player, ytd-player, video,
    |   etc.)
177 | - Raised thresholds: coverage >70% (was >35%), z-index >50 (was >10)
178 |
179 | ### YouTubeFocus.kt -- Conditional Execution
180 | - Ad skip watchdog + CSS injection only runs when at least one focus feature is enabled
181 | - Previously ran on every YouTube page
182 |
183 | ### VinWebViewClient.kt -- URL Rewrite Removed
184 | - Removed forced `www.youtube.com` ? `m.youtube.com` redirect
185 |
186 | ### WebViewScreen.kt -- Background Color
187 | - WebView background `#0F0F0F` (matches YouTube dark mode)
188 |
189 | ### HomeScreen.kt -- Padding Fix
190 | - Removed double `statusBarsPadding()` (parent Column already applies it)
191 |
192 | ---
193 |
194 | ## [PKG] Dependencies Added
195 |
196 | ```kotlin
197 | // QR Code generation
198 | implementation("com.google.zxing:core:3.5.3")
199 | // CameraX + MLKit for QR scanning
200 | implementation("androidx.camera:camera-core:1.4.1")
201 | implementation("androidx.camera:camera-camera2:1.4.1")
202 | implementation("androidx.camera:camera-lifecycle:1.4.1")
203 | implementation("androidx.camera:camera-view:1.4.1")
204 | implementation("com.google.mlkit:barcode-scanning:17.3.0")
205 | ```
206 |
207 | ---
208 |
209 | ## ? Known Issues / TODO
210 |
211 | ### Build Status
212 | - **NOT build-verified** -- Build timed out on slow Windows machine
213 | - Try `./gradlew assembleDebug` on Linux
214 | - All imports and signatures checked manually -- should compile
215 |
216 | ### Potential Compilation Issues
217 | 1. `ThemePickerSheet.kt` -- Custom `border` extension was removed, replaced with
    |   `Modifier.border()`
218 | 2. `QrScannerScreen.kt` -- Uses CameraX + MLKit, needs camera permission in manifest
219 | 3. `BottomNavBar.kt` -- New signature, ensure all call sites updated (only
    |   `MainActivity.kt`)
220 |
221 | ### Features Not Yet Wired
222 | 1. **QR Scanner** -- `QrScannerScreen.kt` exists but needs to be added to `MainActivity.kt`
    |   navigation
223 | 2. **Screenshot** -- Logic exists but no UI button wired in menu
224 | 3. **Reading List** -- Sheet exists, needs menu integration
225 | 4. **Download Manager** -- Sheet exists, needs download listener integration
226 | 5. **User Scripts** -- Sheets exist, needs WebView injection logic
227 | 6. **Tab Groups** -- Model exists, UI needs tab tray integration
228 |
229 | ### AndroidManifest.xml Needs
230 | - Camera permission for QR scanner
231 | - Internet permission (should already be there)
232 | - Foreground service permission for media playback
233 |
234 | ---
235 |
236 | ## [TARGET] Next Steps (Priority Order)
237 |
238 | 1. **Build verification** -- Run `./gradlew assembleDebug` and fix any compilation errors
239 | 2. **Wire QR Scanner** -- Add to MainActivity navigation
240 | 3. **Wire Reading List** -- Add "Save to Reading List" in menu
241 | 4. **Wire Screenshot** -- Add button in menu

```

```

242 | 5. **Wire User Scripts** -- Add WebView injection in `VinWebView.kt`
243 | 6. **Wire Tab Groups** -- Update `TabTraySheet.kt`
244 | 7. **Wire Download Manager** -- Add `DownloadListener` in `WebViewScreen.kt`
245 | 8. **Test on device** -- All features need end-to-end testing
246 |
247 | ---
248 |
249 | ## ? Build Artifacts (on D:\Games)
250 | - `ViN-Browser-v1.0.0-debug.apk` -- Old version (before new features)
251 | - `ViN-Browser-v1.0.0-release.apk` -- Old version
252 |
253 | ---
254 |
255 | ## ? Key Patterns (Follow These)
256 |
257 | ### Data Flow
258 | ```
259 | StorageService (SharedPreferences) ? BrowserViewModel (StateFlow) ? Compose UI
260 | ```
261 |
262 | ### Adding a New Feature
263 | 1. Add data class to `Models.kt`
264 | 2. Add CRUD methods to `StorageService.kt`
265 | 3. Add state flows + methods to `BrowserViewModel.kt`
266 | 4. Create UI sheet in `ui/components/`
267 | 5. Wire in `MainActivity.kt` (add sheet state + overlay)
268 | 6. Add menu entry in `MenuSheet.kt`
269 |
270 | ### UI Conventions
271 | - All sheets use `ModalBottomSheet` with `rememberModalBottomSheetState`
272 | - Use `Space.Space*` and `Sizes.*` tokens from `Dimens.kt`
273 | - Use `VinColors.*` brand roles from `Color.kt`
274 | - Material 3 components only
275 |
276 | ---
277 |
278 | ## ?? Target UI Reference
279 |
280 | Two screenshots showing the target design:
281 | - `WhatsApp Image 2026-09-11 at 8.55.32 PM.jpeg` -- Current state
282 | - `WhatsApp Image 2026-09-11 at 8.55.33 PM.jpeg` -- Target design
283 |
284 | **Target features:**
285 | 1. Compact top bar: G logo + search + mic + QR + VPN
286 | 2. Horizontal scrollable speed dial (not grid)
287 | 3. Bottom nav: Home / Search / + / Tabs / Menu
288 |
289 | ---
290 |

```

FILE: docs/ADBLOCK-VALIDATION.md

39 lines | 2,968 bytes

```

1 | # Adblock repair validation
2 |
3 | ## Reproduce
4 |
5 | From the project root, with a JDK 17 on PATH:
6 |
7 | ```sh
8 | ./gradlew :app:testDebugUnitTest --tests 'com.vin.browser.adblock.*' --offline
9 | --console=plain
10 | ./gradlew :app:testDebugUnitTest :app:assembleDebug --offline --console=plain
11 | ```
12 | On this machine the existing JDK is `/home/vin/.jdk/temurin-17`.
13 |
14 | ## Observed results (2026-09-16 UTC)
15 |
16 | - Original implementation: 12 regression tests executed, 11 failed.
17 | - Focused first/third-party test: reproduced failing, then passed after repair.
18 | - Final suite: 14 tests, zero failures/errors. Includes the current bundled EasyList and
19 |   EasyPrivacy assets through the actual parser and engine.
20 | - Final `:app:testDebugUnitTest :app:assembleDebug`: BUILD SUCCESSFUL.
21 | - APK: `app/build/outputs/apk/debug/app-debug.apk` (debug build, approximately 46 MB).
22 | - `adb devices`: no connected devices. No live website or Android WebView rendering
23 |   acceptance test was possible.
24 |
25 | ## Coverage
26 |
27 | Tests cover keyword-independent patterns, rules beyond the old 500 limit,
28 | wildcard/separator/URL anchors, domain-path boundaries, network exceptions,
29 | included/excluded page domains, party constraints, safely skipping unsupported options,
30 | search-provider ad rules, global/site/exact-URL overrides, cosmetic selector lookup
31 | when disabled, remote replacement and popup preservation, remote exception removal, and
32 | actual bundled-list URL samples.

```

```

26 |
27 | The engine retains domain indexing. URL patterns are compiled once and use a literal
   | precheck before regex evaluation. This is not an on-device performance benchmark.
28 |
29 | ## Limitations and next checks
30 |
31 | - Only the documented filter subset is supported. Resource-type options, scriptlets,
   | procedural filters, and arbitrary regex semantics are not implemented. Unsupported
   | options are skipped rather than broadened.
32 | - Party classification still uses the existing last-two-host-label approximation, not a
   | Public Suffix List. Multi-label public suffixes such as `co.uk` need follow-up.
33 | - Category guessing remains heuristic. Disabling tracker blocking may also disable rules
   | classified as trackers that target ads.
34 | - The existing startup loader adds cached remote files through `loadRules`; replacement
   | behavior is tested at the engine API, not across app restarts with disk caches.
35 | - The existing WebView client and cleanup scripts had unrelated uncommitted edits and were
   | left untouched. Generic cleanup injection does not necessarily honor every setting even
   | though engine selector lookup now respects site disable.
36 | - Main-document protection and media fast paths remain unchanged. This does not promise
   | complete YouTube ad blocking.
37 | - Test on a phone using a local controlled fixture, then representative sites. Check
   | allowed content, blocked network arrivals, site toggles after reload, cold starts, list
   | refreshes, and performance.
38 |
39 | Existing uncommitted application/UI/list changes were preserved. The APK reflects that
   | current worktree, not just the repair commit.

```

FILE: docs/BROWSER-ROADMAP.md

55 lines | 3,689 bytes

```

1 | # ViN: a browser for private research
2 |
3 | ## Product direction
4 |
5 | Make the differentiator remembering useful research and explaining privacy decisions,
   | not a generic chatbot beside a WebView. Similar individual features exist elsewhere.
   | This is a product direction, not a claim of worldwide novelty.
6 |
7 | ## Recommended sequence
8 |
9 | ### 1. Privacy Inspector (first release)
10 |
11 | - Show the URL, matching filter, list source, category, and decision for each request.
12 | - Offer exact-request and site-level exceptions, with a visible reload action and undo.
13 | - Show filter update status and explicitly label unsupported filter syntax.
14 | - Separate measured request counts from estimated bandwidth savings. Do not call a high
   | blocking count evidence that a page is unsafe.
15 | - Acceptance: a local fixture proves blocked requests never reach its server, allowed
   | content renders, and exceptions take effect after reload.
16 |
17 | ### 2. Research Memory (signature feature)
18 |
19 | - Save pages, selected quotes, original URLs, and timestamps into topic workspaces.
20 | - Search locally by words first, with optional on-device semantic search later.
21 | - Answer "where did I read that?" with exact source passages, not unsupported AI summaries.
22 | - Make saving explicit. Never index incognito pages, password fields, or form input.
23 | - Store private content using an Android Keystore-backed encryption design. Provide
   | delete/export controls.
24 | - Acceptance: recover a saved passage offline, verify its source, and verify deletion
   | removes it from both storage and indexes.
25 |
26 | ### 3. Focus Workspaces
27 |
28 | - Study, shopping, and leisure groups with saved tabs, notes, focus timers, and optional
   | distraction filtering.
29 | - Start with organizational separation. Do not advertise separate login/cookie identities
   | until storage isolation is actually implemented and tested.
30 | - Acceptance: workspace restoration survives process death, and private sessions are
   | excluded from restoration.
31 |
32 | ### 4. Change Watch
33 |
34 | - Let users select a price, documentation section, or announcement to watch.
35 | - Show before/after text and timestamps. Use battery-aware scheduled checks, not continuous
   | polling.
36 | - Sites may block automated access. Logged-in monitoring needs explicit consent and careful
   | cookie handling.
37 | - Acceptance: a controlled page change produces one useful notification without duplicates
   | or repeated unnecessary fetches.
38 |
39 | ### 5. Safe Task Assistant (later)
40 |
41 | - Compare open tabs and produce a source-linked research brief.
42 | - Preview proposed actions and their destination before execution.
43 | - Require explicit approval before form submission, purchases, messages, downloads with
   | sensitive data, or account changes.
44 | - Treat page instructions as untrusted content. Do not let a webpage issue commands to the

```

```

|     assistant.
45 | - Acceptance: hostile page text cannot trigger actions or reveal another tab's private
|     content.
46 |
47 | ## Engine reality
48 |
49 | ViN currently uses Android WebView. Its request-interception APIs do not provide complete
|     browser-engine-level filtering, and URL-extension guesses cannot reliably identify
|     resource types. Service workers, media delivery, and changing video-ad systems need
|     separate investigation and testing. Do not promise perfect YouTube blocking or full
|     extension compatibility.
50 |
51 | A more capable embedded engine is an architectural evaluation, not an immediate dependency
|     swap. Compare filtering hooks, extension support, APK size, startup latency, memory,
|     update/security responsibility, and licensing before migrating.
52 |
53 | ## Ship gate
54 |
55 | First ship a reliable blocker with reproducible tests and clear limitations. Then build
|     Privacy Inspector and a simple local-first Research Memory MVP. Do not attempt all five
|     features simultaneously.

```

10. Application Entry Points & Main ViewModel

FILE: app/src/main/java/com/vin/browser/BrowserViewModel.kt

907 lines | 38,367 bytes

```

1 | package com.vin.browser
2 |
3 | import android.app.Application
4 | import android.graphics.Bitmap
